NAG Library Function Document

**nag_opt_nlp_option_set_string (e04wfc)**

1 **Purpose**

*nag_opt_nlp_option_set_string (e04wfc)* may be used to supply individual optional arguments to *nag_opt_nlp_solve (e04wdc)*. The initialization function *nag_opt_nlp_init (e04wcc)* must have been called before calling *nag_opt_nlp_option_set_string (e04wfc)*.

2 **Specification**

```c
#include <nag.h>
#include <nage04.h>

void nag_opt_nlp_option_set_string (const char *string, Nag_E04State *state, NagError *fail)
```

3 **Description**

*nag_opt_nlp_option_set_string (e04wfc)* may be used to supply values for optional arguments to *nag_opt_nlp_solve (e04wdc)*. It is only necessary to call *nag_opt_nlp_option_set_string (e04wfc)* for those arguments whose values are to be different from their default values. One call to *nag_opt_nlp_option_set_string (e04wfc)* sets one argument value.

Each optional argument is defined by a single character string, consisting of one or more items. The items associated with a given option must be separated by spaces, or equals signs (=). Alphabetic characters may be upper or lower case. The string

```
Print Level = 1
```

is an example of a string used to set an optional argument. For each option the string contains one or more of the following items:

- a mandatory keyword;
- a phrase that qualifies the keyword;
- a number that specifies an Integer or double value. Such numbers may be up to 16 contiguous characters which can be read using C’s `d` or `g` formats, terminated by a space if this is not the last item on the line.

For *nag_opt_nlp_option_set_string (e04wfc)*, each user-specified option is not normally printed as it is defined, but this printing may be turned on using the keyword *List*. Thus the statement

```
e04wfc ("List", &state, &fail);
```

turns on printing of this and subsequent options. Printing may be turned off again using the keyword *Nolist*.

Optional argument settings are preserved following a call to *nag_opt_nlp_solve (e04wdc)* and so the keyword *Defaults* is provided to allow you to reset all the optional arguments to their default values before a subsequent call to *nag_opt_nlp_solve (e04wdc)*.

A complete list of optional arguments, their abbreviations, synonyms and default values is given in Section 12 in *nag_opt_nlp_solve (e04wdc)*.

4 **References**

None.
5 Arguments

1:  \texttt{string} – const char *  \hspace{1cm} \textit{Input}
   
   \textit{On entry:} a single valid option string (see Section 3 in \texttt{nag_opt_nlp_option_set_string (e04wfc)} and Section 12 in \texttt{nag_opt_nlp_solve (e04wdc)}).

2:  \texttt{state} – Nag_E04State *  \hspace{1cm} \textit{Communication Structure}
   
   \texttt{state} contains internal information required for functions in this suite. It must not be modified in any way.

3:  \texttt{fail} – NagError *  \hspace{1cm} \textit{Input/Output}
   
   The NAG error argument (see Section 3.6 in the Essential Introduction).

6 Error Indicators and Warnings

\texttt{NE_ALLOC_FAIL}
   
   Dynamic memory allocation failed.
   See Section 3.2.1.2 in the Essential Introduction for further information.

\texttt{NE_BAD_PARAM}
   
   On entry, argument \textit{value} had an illegal value.

\texttt{NE_E04_OPTION_INVALID}
   
   The supplied option is invalid. Check that the keywords are neither ambiguous nor misspelt. The option string is ‘\texttt{value}’.

\texttt{NE_E04WCC_NOT_INIT}
   
   The initialization function \texttt{nag_opt_nlp_init (e04wcc)} has not been called.

\texttt{NE_INTERNAL_ERROR}
   
   An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.
   An unexpected error has been triggered by this function. Please contact NAG.
   See Section 3.6.6 in the Essential Introduction for further information.

\texttt{NE_NO_LICENCE}
   
   Your licence key may have expired or may not have been installed correctly.
   See Section 3.6.5 in the Essential Introduction for further information.

7 Accuracy

Not applicable.

8 Parallelism and Performance

Not applicable.

9 Further Comments

\texttt{nag_opt_nlp_option_set_file (e04wec)}, \texttt{nag_opt_nlp_option_set_integer (e04wgc)} or \texttt{nag_opt_nlp_option_set_double (e04whc)} may also be used to supply optional arguments to \texttt{nag_opt_nlp_solve (e04wdc)}. 
10  Example

See Section 10 in nag_opt_nlp_option_set_file (e04wec).
