NAG Library Function Document

nag_opt_nlp_option_set_integer (e04wgc)

1 Purpose

nag_opt_nlp_option_set_integer (e04wgc) may be used to supply individual Integer optional arguments to nag_opt_nlp_solve (e04wdc). The initialization function nag_opt_nlp_init (e04wcc) must have been called before calling nag_opt_nlp_option_set_integer (e04wgc).

2 Specification

```c
#include <nag.h>
#include <nage04.h>
void nag_opt_nlp_option_set_integer (const char *string, Integer ivalue, 
Nag_E04State *state, NagError *fail)
```

3 Description

nag_opt_nlp_option_set_integer (e04wgc) may be used to supply values for Integer optional arguments to nag_opt_nlp_solve (e04wdc). It is only necessary to call nag_opt_nlp_option_set_integer (e04wgc) for those arguments whose values are to be different from their default values. One call to nag_opt_nlp_option_set_integer (e04wgc) sets one argument value.

Each Integer optional argument is defined by a single character string in `string` and the corresponding value in `ivalue`. For example, the following allows the iteration limit to be defined:

```c
itnlim = 1000;
if (m > 500) itnlim = 500;
e04wgc ("Iterations", itnlim, &state, &fail);
```

Optional argument settings are preserved following a call to nag_opt_nlp_solve (e04wdc) and so the keyword Defaults is provided to allow you to reset all the optional arguments to their default values before a subsequent call to nag_opt_nlp_solve (e04wdc).

A complete list of optional arguments, their abbreviations, synonyms and default values is given in Section 12 in nag_opt_nlp_solve (e04wdc).

4 References

None.

5 Arguments

1: `string` – const char * 
   *Input*
   On entry: a single valid keyword of an Integer optional argument (as described in Section 12 in nag_opt_nlp_solve (e04wdc)).

2: `ivalue` – Integer 
   *Input*
   On entry: an Integer value associated with the keyword in `string`.

3: `state` – Nag_E04State * 
   *Communication Structure*
   `state` contains internal information required for functions in this suite. It must not be modified in any way.
4:  fail – NagError *

The NAG error argument (see Section 3.6 in the Essential Introduction).

6 Error Indicators and Warnings

NE_ALLOC_FAIL
Dynamic memory allocation failed.
See Section 3.2.1.2 in the Essential Introduction for further information.

NE_BAD_PARAM
On entry, argument \texttt{value} had an illegal value.

NE_E04_OPTION_INVALID
The supplied option is invalid. Check that the keywords are neither ambiguous nor misspelt. The
option string is 'value' and \texttt{ivalue} = \texttt{value}.

NE_E04WCC_NOT_INIT
The initialization function nag_opt_nlp_init (e04wcc) has not been called.

NE_INTERNAL_ERROR
An internal error has occurred in this function. Check the function call and any array sizes. If the
call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.
See Section 3.6.6 in the Essential Introduction for further information.

NE_NO_LICENCE
Your licence key may have expired or may not have been installed correctly.
See Section 3.6.5 in the Essential Introduction for further information.

7 Accuracy
Not applicable.

8 Parallelism and Performance
Not applicable.

9 Further Comments
nag_opt_nlp_option_set_file (e04wec) or nag_opt_nlp_option_set_string (e04wfc) may also be used to
supply Integer optional arguments to nag_opt_nlp_solve (e04wdc).

10 Example
See Section 10 in nag_opt_nlp_solve (e04wdc) and nag_opt_nlp_option_set_file (e04wec).
