## nag\_zunmrz (f08bxc)

## 1 Purpose

nag\_zunmrz (f08bxc) multiplies a general complex m by n matrix C by the complex unitary matrix Z from an RZ factorization computed by nag\_ztzrzf (f08bvc).

## 2 Specification

```
#include <nag.h>
#include <nagf08.h>
```

```
void nag_zunmrz (Nag_OrderType order, Nag_SideType side,
    Nag_TransType trans, Integer m, Integer n, Integer k, Integer l,
    const Complex a[], Integer pda, const Complex tau[], Complex c[],
    Integer pdc, NagError *fail)
```

## **3** Description

nag\_zunmrz (f08bxc) is intended to be used following a call to nag\_ztzrzf (f08bvc), which performs an RZ factorization of a real upper trapezoidal matrix A and represents the unitary matrix Z as a product of elementary reflectors.

This function may be used to form one of the matrix products

 $ZC, Z^{\mathrm{H}}C, CZ, CZ^{\mathrm{H}},$ 

overwriting the result on C, which may be any complex rectangular m by n matrix.

## 5 Arguments

On entry: the **order** argument specifies the two-dimensional storage scheme being used, i.e., rowmajor ordering or column-major ordering. C language defined storage is specified by **order** = Nag\_RowMajor. See Section 3.2.1.3 in the Essential Introduction for a more detailed explanation of the use of this argument.

*Constraint*: **order** = Nag\_RowMajor or Nag\_ColMajor.

```
2: side – Nag_SideType
```

On entry: indicates how Z or  $Z^{H}$  is to be applied to C.

side = Nag\_RightSide Z or  $Z^{H}$  is applied to C from the right.

*Constraint*: **side** = Nag\_LeftSide or Nag\_RightSide.
