1 Purpose

nag_rand_weibull (g05ssc) generates a vector of pseudorandom numbers from a two parameter Weibull distribution with shape parameter $a$ and scale parameter $b$.

2 Specification

```c
#include <nag.h>
#include <nagg05.h>

void nag_rand_weibull (Integer n, double a, double b, Integer state[],
                       double x[], NagError *fail)
```

3 Description

The distribution has PDF (probability density function)

$$f(x) = \frac{a}{b} x^{a-1} e^{-x^a/b} \text{ if } x > 0,$$

$$f(x) = 0 \text{ otherwise.}$$

nag_rand_weibull (g05ssc) returns the value $(-b \ln y)^{1/a}$, where $y$ is a pseudorandom number from a uniform distribution over $(0,1]$.

One of the initialization functions nag_rand_init_repeatable (g05kfc) (for a repeatable sequence if computed sequentially) or nag_rand_init_nonrepeatable (g05kgc) (for a non-repeatable sequence) must be called prior to the first call to nag_rand_weibull (g05ssc).

4 References

5 Arguments

1: $n$ – Integer

   On entry: $n$, the number of pseudorandom numbers to be generated.

   Constraint: $n \geq 0$.

2: $a$ – double

   On entry: $a$, the shape parameter of the distribution.

   Constraint: $a > 0.0$.

3: $b$ – double

   On entry: $b$, the scale parameter of the distribution.

   Constraint: $b > 0.0$. 
state[dim] – Integer

Note: the dimension, dim, of this array is dictated by the requirements of associated functions that must have been previously called. This array MUST be the same array passed as argument state in the previous call to nag_rand_init_repeatable (g05kfc) or nag_rand_init_nonrepeatable (g05kgc).

On entry: contains information on the selected base generator and its current state.
On exit: contains updated information on the state of the generator.

x[n] – double

Output

On exit: the n pseudorandom numbers from the specified Weibull distribution.

fail – NagError*

Input/Output

The NAG error argument (see Section 3.6 in the Essential Introduction).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.
See Section 3.2.1.2 in the Essential Introduction for further information.

NE_BAD_PARAM

On entry, argument (value) had an illegal value.

NE_INT

On entry, n = (value).
Constraint: n ≥ 0.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.
See Section 3.6.6 in the Essential Introduction for further information.

NE_INVALID_STATE

On entry, state vector has been corrupted or not initialized.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.
See Section 3.6.5 in the Essential Introduction for further information.

NE_REAL

On entry, a = (value).
Constraint: a > 0.0.

On entry, b = (value).
Constraint: b > 0.0.

7 Accuracy

Not applicable.
8 Parallelism and Performance

nag_rand_weibull (g05ssc) is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

Please consult the X06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this function. Please also consult the Users’ Note for your implementation for any additional implementation-specific information.

9 Further Comments

None.

10 Example

This example prints the first five pseudorandom numbers from a Weibull distribution with shape parameter 1.0 and scale parameter 2.0, generated by a single call to nag_rand_weibull (g05ssc), after initialization by nag_rand_init_repeatable (g05kfc).
